

Fancom has developed special F-Central versions for farms with fatteners, breeding sows, broilers/rearers/turkeys, layers, mushroom growing and storage. Each F-Central version includes sector-specific management tools. Preset pages showing the most important data are clearly presented. Information not relevant to your sector is omitted.

An F-Central program for each sector

No rights can be derived from the text, photos and drawings in this folder.

Your dealer:

F-Central for anyone and each PC

F-Central is compatible with all PCs with Windows control: including PCs with Windows XT, NT and Windows 2000. During F-Central's development, the program was constantly adapted to meet the requirements of users and to follow developments in PC and computer technology. We intend to continue evolving the program in the future. F-Central users can benefit from these developments via free upgrades and new updates.

AGRI-COMPUTERS

TECHNOLOGY TO HELP YOU GROW

Fancom designs and develops automation systems for the pig and poultry sectors, as well as for mushroom farming and potato, vegetable and fruit storage. Fancom computers automatically control the optimal climate conditions, feeding and weighing on your farm. Thanks to our network of specialised Fancom Dealers, you can count on professional advice, installation and after-sales service of our systems in more than 40 countries.

F-Central operational management from behind your PC

Extensive possibilities
Your company advisor can also be allowed the same easy access to farm data as yourself. Giving you both a clear overview of the situation. Those wanting to use data from their climate computers in bookkeeping or other management programs, have come to the right people at Fancom. F-Central can export data to other PC programs, such as Access and Excel, and programs that meet the ADIS standard.

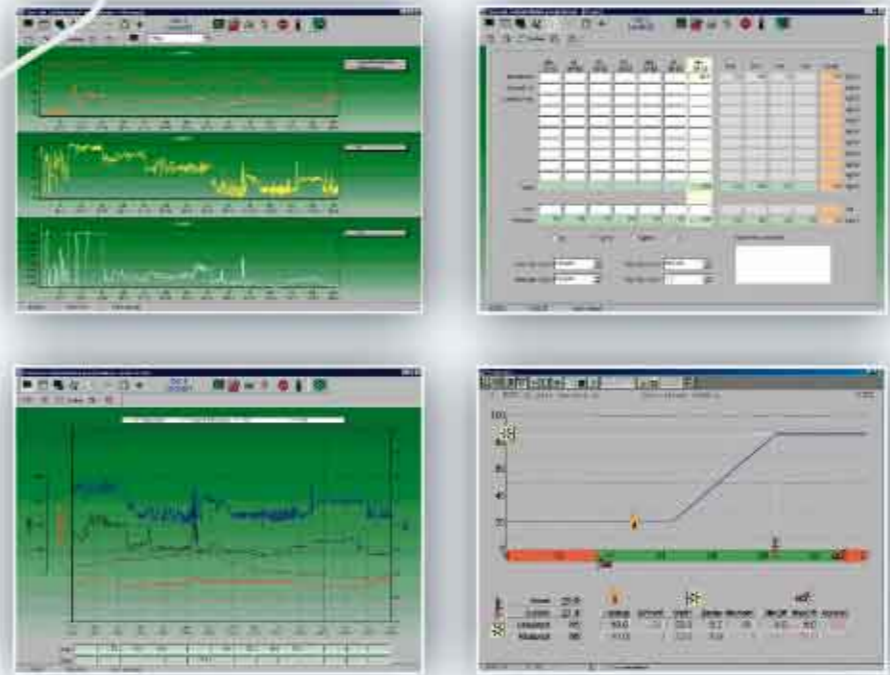

Achieve more from your climate, feeding and weighing computer
F-Central is our special program for operational management from the PC. Using F-Central, all Fancom climate, feed and weighing computers are constantly linked to the PC at home or in the office. An indispensable aid for anyone wishing to optimise their company results.

Remote control
F-Central automatically links your Fancom climate controllers to the PC. React to alarm situations and change control settings in your Fancom computers from the PC. Saving you valuable time and creating remote company control.

A complete company overview at a glance
F-Central means all data from your Fancom computers can be examined on your PC at any time, supplying a wealth of information relating to temperature, air humidity, CO2, alarm messages, feed data and animal weight. Regularly used data can be given a special location in F-Central. Various features allow this data to be converted into individualised illustrations. A customised information flow from F-Central.

Data analysis for better results
F-Central automatically stores all data received from the Fancom computers in the PC. This data can be converted automatically into easy to read graphs and diagrams. Compare various houses and situations to answer such questions as: "Why does one house perform better than another?" or "How did we make the settings last time?" and "Where can I cut down on costs?"

SMS alarm service for mobile phones
F-Central users can automatically send alarm messages from the PC to a mobile phone. An alarm description will appear on the mobile phone display, allowing you to assess the seriousness of the situation and decide whether immediate action is necessary or not.

Discover just what F-Central can mean for your company.
